LETTER window 180 x 180 mm largest tool 170 x 170 corner squares 0-3 tool capture sheet v3, 2026-09-11 | tools/trace sheet.py

Print at 100%. If this bar is not 100mm, write the measured length here: ____ mm

ONE TOOL, lying FLAT inside the window as it sits in the drawer, on its widest face, clear of the border line. Write its TAG in the box.

MEASURE its tallest point above the paper in mm and write it in the HEIGHT box.

PHOTO from straight above, phone flat, high enough that the sheet is about a third of the screen, all four corner squares in frame, no flash, the tool still on the sheet.

FORM: tag, height, photo. Does not fit the window: take a bigger sheet. A plain rectangular slab: write L, W and thickness in the boxes instead.
